LAMPIRAN

Lampiran I. Prosedur penelitian

A. Analisis keasaman (pH) dilakukan dengan menggunakan alat yaitu pH meter dengan proses sebagai berikut :

1. Jamur yang berada dalam pouch di buka menggunakan gunting dengan lebar 2 cm.
2. Kemudian alat ph meter di kalibrasi menggunakan pH 4,5 dan 7,5.
3. Lalu di catat berada di angka berapa ph meter setelah di kalibrasi.
4. Kemudian alat pH meter di masukan kedalam jamur yang ada di dalam kemasan pouch.
5. Lalu di amati sampai angka nya tidak berubah. Dan di catat

B. Analisis garam (*Salt Level*) di lakukan dengan menggunakan alat refractometer:

1. Buka kemasan pouch jamur kancing. Selebar 2 cm menggunakan gunting.
2. *Refractometer* di kalibrasi menggunakan air atau *Aquades*.
3. Lalu ambil larutan brine menggunakan pipet dan semprotkan ke *Refractometer*.
4. Lalu amati berapa hasil yang muncul. Dalam *refractometer* setiap garis memiliki nilai 0,2 dan setiap garis kelipatan 2.

C. Analisis garam (*Salt Level*) di lakukan dengan menggunakan alat salino :

1. Buka kemasan pouch jamur kancing. Selebar 2 cm menggunakan gunting.
2. Salt meter di kalibrasi terlebih dahulu menggunakan *Aquades*.
3. Lalu salt meter di masukkan kedalam larutan brine yang ada di dalam pouch.
4. Lalu di amati dengan berapa hasil yang muncul. Sampai tidak berubah.
